Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 03, 2007 has been entered.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Nice [3705371].

Van Nice discloses an air-core coil comprising:

- unit coil portions 28, 30, 32, 34 each having at least one conductor wound into a spiral form ;
- the unit coil portions being arranged repeatedly axially of the coil;
- each of the unit coil portions comprising a plurality of unit turn portions 1A, 1B, 2A, 2B, 3A, 3B.. which are different from each other in inner peripheral length; and are direct contact with each other;

Art Unit: 2832

- the unit turn portions of small inner peripheral being at least partly forced inwardly of and adjacent to the unit turn portions of great inner peripheral length [coil turn 1B is smaller than coil turn 1A in peripheral length];
- the plurality of unit turn portions providing each of the unit coil portions are sequentially wound from the outer peripheral side to the inner peripheral side [from 1 to 10];
- one unit turn portion of the inner most periphery being connected to another unit turn on an innermost periphery F of the adjacent unit coil;
- whereby each of the unit coil portions is made at least partly multi-layered [see figure 2].

With respect to claims 3-4, Van Nice discloses the air-core coil fitted around a core 10 [figure 1, col 1, lines 49-69].

With respect to claims 6-8, the claim is method counterpart of structure claims 1-5, the methods steps therefore inherent for manufacturing a coil comprising windings being wound in the multilayer fashion.

Art Unit: 2832

Response to Arguments

3. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.
